

Practice Quiz - ML Pipelines

Pregunta 1:

1. Which answer is true?

- ☒ Machine Learning Pipelines allow for reuse of data preprocessing steps to switch and swap different algorithms in and out in order to obtain the best model
- ☐ Machine Learning Pipelines run faster than individual data processing steps since in a pipeline all processing is fused into a smaller amount of low level machine instructions

✓ **Correcto**
Correct

Pregunta 2:

2. Which statement is true?

- ☒ Data preprocessing is one of the most important and time consuming step and affect model performance significantly
- ☐ Data preprocessing is a small and easy step and doesn't affect model performance

✓ **Correcto**
Correct
